

## Refactoring Extract Class

You have one class doing work that should be done by two.

Class name:

Destination: ☒ Top level class ☐ Nested class in Pessoa

Select fields for extracted class:

Type	Name
<input type="checkbox"/> String	name
<input type="checkbox"/> String	lastName
<input checked="" type="checkbox"/> String	rg
<input checked="" type="checkbox"/> String	cpf
<input type="checkbox"/> Endereco	end

[Edit...](#)

☒ Create getters and setters

Field name:

Cancel

Finish
